SUMMARY

Backend Software Engineer with Frontend Developer capabilities and 3.5+ years of experience building scalable web applications using **.NET Core, C#, React.js, SQL Server, and IBM DB2**. Strong background in **RESTful API development**, secure authentication (JWT), database optimization, and **Azure-based deployments**. Experienced in **CI/CD pipelines**, Agile collaboration, and resolving production-critical (P0/P1) issues. Passionate about delivering maintainable, high-quality enterprise software.

EXPERIENCE

Tata Technologies

Solution Developer

Pune, Maharashtra, India

Jan 2023 – Present

- **Aerothermal Hub:** Modernized the Aerothermal Hub by consolidating 4 automotive lab applications into a unified .NET 8 platform, designing **modular backend components**, building **JWT-secured REST APIs**, implementing aerothermal calculations, ingesting .dat files from Rocky Linux servers, and generating Excel reports with histograms, Pie and Scatter plots (OpenXML, SpreadsheetLight).
- **ACWA (Altitude Chart Web Application II):** Designed and maintained scalable REST APIs using .NET 8 Web API with JWT-based authentication, applying Repository and Unit of Work patterns to improve maintainability while collaborating in Agile cross-functional teams.
- **PowerGrid Announcement:** Modernized a full-stack application for large-scale manufacturing display systems to broadcast live and historical announcements with secure login access. Built backend services using **.NET 8 Web API** and developed a responsive frontend in **React.js**.
- Developed a **WPF**-based channel export utility integrated with DataNav Catalyst Dyno, reducing manual data preparation effort across **1000+** test files by enabling selective extraction of required channels from 250+ available, **eliminating the need for post-export column removal**.
- Architected a **WPF**-based background application that automatically imports and synchronizes **vehicle** and **EV** testing data to a central server at user login, featuring folder monitoring, **real-time progress** tracking via a system tray icon, and configurable **automatic deletion** of imported data after a user-defined retention period, eliminating 100% of manual Efforts.
- Automated and deployed **10+ automated console applications** scheduled via **Windows Task Scheduler** for server monitoring, disk usage tracking, and version management.
- Performed **SAST**-driven remediation using **Checkmarx**, refactoring legacy .NET code to resolve high/medium severity findings including SQL Injection, XSS, improper input validation, and insecure object references.
- Collaborated with cross-functional teams to review requirements and provided accurate **effort estimates** for development tasks, ensuring timely delivery of software modules.

SKILLS

Backend: C#, .NET Core (3.1, 8), ASP.NET Core Web API, Entity Framework Core, ADO.NET, WPF.

Frontend: React.js, Redux Toolkit (RTK), JavaScript, TypeScript, HTML5, CSS3, AG-Grid, Apache Recharts.

Databases: SQL Server, IBM DB2, MongoDB.

Testing & Quality: Unit Testing (xUnit), Regression Testing.

Architecture: Design Pattern, SOLID Principles, Repository Pattern, Unit of Work, MVVM.

Security: JWT Authentication, OWASP Top 10.

EDUCATION

Jadavpur University

Master of Technology in Distributed & Mobile Computing (85%)

Kolkata, India

Aug 2020 – Aug 2022

FREELANCE

Pother Sandhane

- Developed a tourism and hotel booking web application serving as a business landing platform. 

ACHIEVEMENTS

- Qualified **GATE CS 2020** with **93 percentile**.
- Freelanced as a Computer Science Subject Matter Expert for Chegg and Bartleby (2020 – 2022).
